REMOTE LOCKING SYSTEM (RLS)

RLS TOUCH

Hackney's RLS Touch eliminates the body locking handles and gives the operator complete control to lock both driver and curbside doors with a push of a button...in the truck or outside of it. When the key fob lock is pressed, standard programming triggers the truck horn, headlights, and taillights to activate once to indicate all body doors are down and locks have been initiated. In cases where the lock is pressed, but either side door is open and cannot be locked, the operator is warned through a series of horn and light signals.

REMOTE LOCKING SYSTEM

Introducing a New Standard for Locking Roll-Up Doors

Features	RLS TOUCH	RLS BOLT
	New Side Load Bodies	Used Side Load Bodies
Cab interior lock & remote key fob	✓	✓
No exterior locking handles	✓	
Lock each side independently	✓	✓
Manual override if lost key fob, dead batteries, or electrical failure	✓	✓
Actuator tested to 20K cycles of lock and unlock	✓	
Horn and body light alerts are customizable	✓	✓
Key fob transmits up to 200 ft.	✓	✓
Bolt mechanism withstands over-torqueing of the handle lock		✓
Retrofittable		✓
Rolling code transmitter for increased security	✓	✓

- ✓ **SECURE**
- ✓ **REMOTE LOCK INSIDE & OUT OF VEHICLE**

RLS BOLT

Hackney's RLS Bolt is for used side load bodies. The Bolt Aftermarket version will incorporate the same wireless key fob and signal indicators, but works in conjunction with the current body locking handles. When the key fob lock is pressed, the roll-up door locking cylinders are activated reassuring the operator that the doors are locked. This system eliminates the need for the body lock key and provides a "deadbolt" added protection in case a thief breaks off the locking handle. Through Hackney's Refurbishment services, the Bolt can be up fitted to most Hackney or competitor side load units.
